Using Ad-Aware

Using Ad-Aware is actually very simple. As always, before running a scan, we recommend checking for updates. To do this, with Ad-Aware open, click Update.
After a moment, the window will finish loading. Click OK.
Once you have updated Ad-Aware, click the Status button. Then, click Scan Now.
4. The next window will ask you what Scan Mode you wish to use. We recommend using a Smart Scan. After selecting that, click Scan.
5. Now, the window will reflect the progress of the scan as AdAware scans your system. At this point, there is nothing to do but wait.
6. After the scan is complete, a window will appear with three tabs. The first tab is Critical Objects. Check any items found in the box shown and then click Remove. The second box is Privacy Objects. Check any items found in the box shown and then click Remove. The final tab is Log File. This is a log of all the items detected and their location. Once you have removed all items detected, click Finish.
